Summary

Norwegian Hull Club (NHC) is a mutual insurance undertaking writing global marine and medical expense insurance. The 2021 earned gross premium was 268 million USD, up with 16% from 2020. The operating result was 47 million USD.

The below table summarizes the solvency conditions in terms of Solvency Capital Requirement (SCR), Minimum Capital Requirement (MCR) and Own Funds in USD 1000.

	2021		2020	
	SCR	MCR	SCR	MCR
Eligible Own Funds	486,424	391,240	426,565	346,482
Capital Requirement	190,368	47,592	170,535	43,706
Difference	296,056	343,648	256,030	302,776
Ratio	256%	822%	250%	793%

The chart below displays how the Solvency Capital Requirement is built up:

1 Business and Performance

1.1 Business

NHC is a mutual marine insurance company writing marine and medical insurance. Clients writing hull insurance on a mutual basis are owners, referred to as members. Members are owners and managers of insured units.

Principal Address: Solheimsgaten 5
5058 Bergen
Norway

NHC is supervised by the Financial Supervisory Authority of Norway (FSAN).

Contact details: post@finanstilsynet.no
Revierstredet 3
Postboks 1187 Sentrum
0107 Oslo

The external auditor is Deloitte.

Contact details: jharila@deloitte.no
Lars Hilles gate 30
5008 Bergen

The largest members have less than 10% ownership and there are thus no holders of qualifying holdings in the undertaking.

NHC writes a global book of Hull & Machinery, Loss of Hire, Increased Value, War, yachts, Builders risk covers, Energy (fixed and floating) insurance -operation and construction. In addition, P&I covers are provided to owners and charterers and medical expense insurance is provided to seafarers and their relatives. Marine and Energy insurance is placed and written globally, mainly through brokers. A major part of the business is with international clients.

NHC has 2,5 % market share of global hull market. The Nordic market has its own conditions (<http://www.nordicplan.org/>), in which the role as claims leader is distinctive and important. NHC has long experience as claims leader, and this role is an important part of its service offering.

NHC has a branch office in London, writing business produced by London brokers as well as maintaining the existing business relationships.

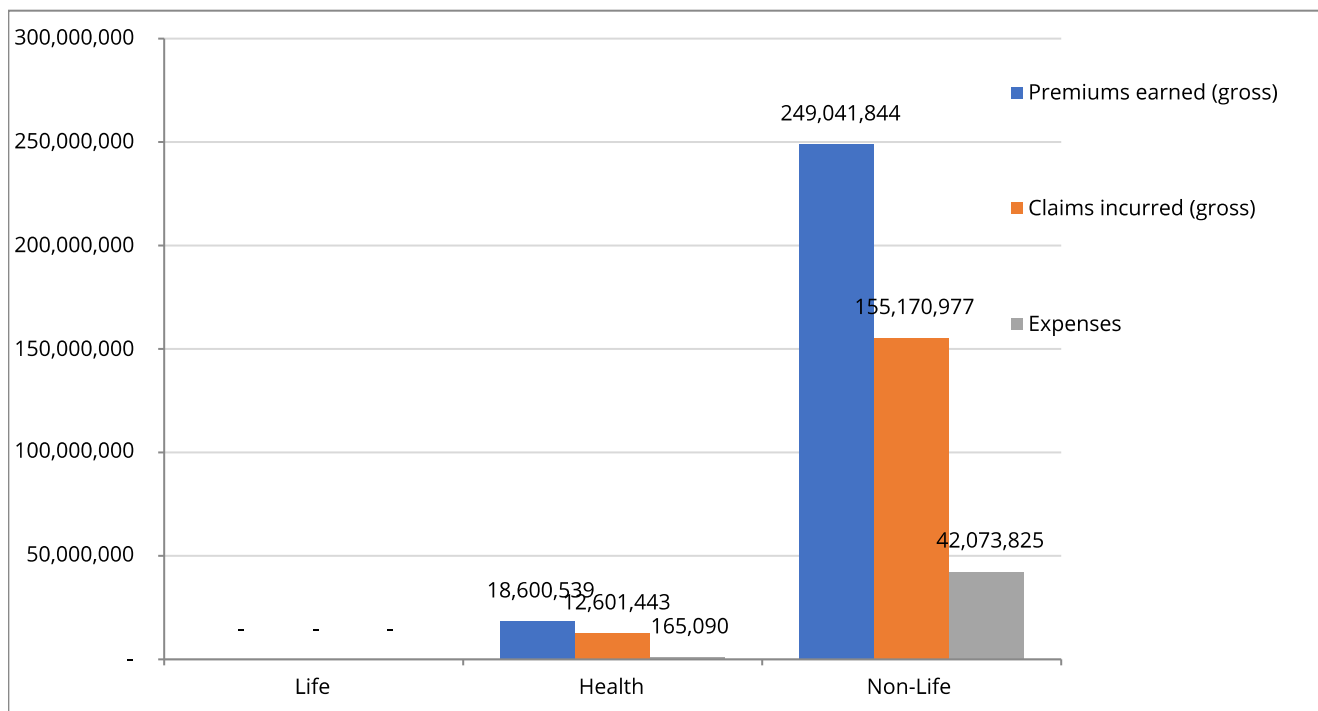

Legal structure

NHC has two subsidiaries (100% owned) located in Bergen: Insurance Technology Solutions AS and Marine Benefits AS. NHC has also a participation in Olav Kyrres gate 11 AS with 33 % share. Information regarding subsidiaries and associated company's results can be found from the Annual Report note 4.

1.2 Underwriting Performance

From 2010 NHC has had strong underwriting performance reflecting its focus on underwriting profit through comprehensive Client Risks Assessment models.

The underwriting performance in 2020 and 2021 were better than expected.

1.2.1 Life underwriting

NHC does not write life insurance.

Premiums, claims and expenses	2021	2020
Life		
Premiums earned (gross)	-	-
Claims incurred (gross)	-	-
Expenses	-	-

1.2.2 Health underwriting

Health underwriting performance is shown in the table below. The health portfolio is limited to Medical Expense Insurance for seafarers.

Premiums, claims and expenses	2021	2020
Health		
Premiums earned (gross)	18,600,539	16,890,212
Claims incurred (gross)	12,601,443	11,627,794
Expenses	165,090	154,341

1.2.3 Non-Life underwriting

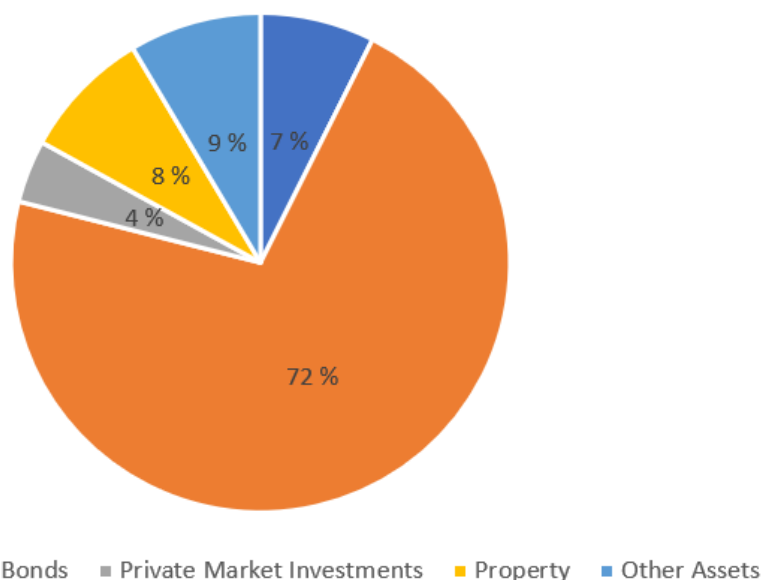

Non-Life underwriting performance is shown in the table below. The 2021 underwriting performance was better than internal targets.

Premiums, claims and expenses	2021	2020
Non-Life		
Premiums earned (gross)	249,041,844	213,069,198
Claims incurred (gross)	155,170,977	155,240,485
Expenses	42,073,825	40,168,599

1.3 Investment Performance

1.3.1 Investments held

The chart below visualizes the relative distribution of the investments by material asset class. "Other investments" are investments through investment funds.

The asset classes in the gains and losses table below follow the Solvency II balance sheet categories. This categorization deviates from the categorization used in the asset allocation diagram.

1.3.2 Gains and losses

The investment portfolio delivered a +2.6 % return in 2021 against budgeted returns of +1.8 %. In nominal terms, the return (minus FX contracts) was USD 11.7million. Risk-assets, in particular, delivered strong returns across the board. Fixed income returns were more dampened, with the aggregate bond benchmark barely breaking even.

2021 was (another) year of uncertainty and volatility following the onset of the Covid-19 pandemic along with a surging economy resulting from reopening of societies and strong fiscal and monetary stimulus. Strong consumer demand, industrial production struggling to catch up after lengthy shutdowns due to shortages in labor and certain commodities resulted in inflation not seen in decades. Less confidence in the transitory nature of inflation led the Federal Reserve to change its rhetoric about a taper of its massive asset purchases and announced that it would start to reverse its ultra-easy monetary policy earlier than expected. Yields on US Treasuries increased significantly, and yield curves finished the year higher and steeper than at the start. As a result, the more rate-sensitive and low-risk investments such as investment grade corporate bonds and Treasury bonds struggled.

The below table summarizes the investment portfolio return per asset class.

Gains and losses in the period (2021)	Dividends	Interest	Rent	Net gains/losses	Unrealised gains/losses
Bonds	-	5,238,472	-	195,300	(6,785,922)
Equity	-	-	-	-	-
Other Investments	2,343,227	1,907,702	-	6,736,311	1,022,639
Cash and deposits	-	60,895	-	-	-
Mortgages and loans	-	303,924	-	-	-
Property	-	-	-	-	-
Derivatives	-	-	-	-	-
Total	2,343,227	7,510,993	-	6,931,611	(5,763,283)

1.3.3 Securitisation investments

NHC has no material investments in securitisations.

1.4 Performance of other activities

There have been no other significant activities than insurance and related activities. Income related to claims handling is reported as "Other insurance related income" in the annual accounts and amounts to 7.3 MUSD.

1.5 Any other information

There is no other material information to be disclosed.

2 System of governance

NHC is located in Norway, are subject to Norwegian legislation and under supervision of the FSAN.

2.1 General information on the system of governance

NHC's Board carry the responsibility for the oversight of the business and set its strategy and risk appetite. The Board sits with a minimum of five and a maximum of ten members. The Board decides whether the entire Board shall serve as audit and risk committee, or whether the committees shall be elected by and from the members of the Board. NHC is committed to high standards of corporate governance and has established the following corporate governance structure.

2.1.1 Governance

General Meeting

Members of NHC, clients that write business on a mutual basis, vote at the general meeting according to the Norwegian Limited Companies Act § 5-2, cf. Norwegian Financial Institutions § 8.1-8.3. Members have votes according to the member's share of the NHC's mutual earned premium in the preceding calendar year. Joint Members have together as many votes as if the insurance agreement had been entered into by one member. The right to vote on behalf of the Joint Members shall be vested in the member named first in the insurance agreement.

Committee

The Committee elects the Board, recommends annual accounts to the General Meeting and supervises the Board and management. The members of the Committee are elected from the members, i.e. the owners, of NHC.

Board of Directors

The Board is responsible for setting out the strategy, including risk tolerance, and generally overseeing the management of the NHC. Up to two members of the Board can be independent; the others represent members of NHC. The Board has audit, risk and compensation sub-committees. The Chair of the Audit Committee is independent of NHC.

Audit Committee

The Audit Committee is a subcommittee of the Board. Its responsibility is to discuss significant accounting issues with management and the external auditor and to assess procedures adopted for preparing the accounts. The Audit Committee shall further assess the independence of the external auditor, discuss audit issues with external and internal auditor, assess the auditors' work and make recommendation to the Board regarding election of external and internal auditors.

Risk Committee

The Risk Committee is a subcommittee of the Board. It is responsible for supervising NHC's total risk and regularly considers if the management and control systems are adapted to the risk level and scope of operations. The Risk Committee shall further regularly consider the continuous compliance with capital requirements and requirements for technical insurance provisions, as well as the appropriateness of the risk management system. The Risk Committee shall follow up the key functions; actuary, compliance and risk management.

Compensation Committee

The Compensation Committee is also a subcommittee of the Board and makes recommendations to the Board regarding the compensation of the Chief Executive Officer as well as the structure of general compensation, including compensation for the management team.

Election Committee

The Election Committee makes recommendations regarding candidates for the various governing bodies. The Election Committee shall have a minimum of five members. At least one member shall have served on the Board of Directors during the preceding five years.

According to the instructions for the Election Committee, the Chair and Deputy Chair of the Committee, members of the Board and members of the Election Committee shall in general not be re-elected after ten years of service.

Key Functions

NHC has established four key independent control functions required under the Solvency II Directive - risk management, compliance, actuarial and internal audit. These key functions are overseeing and monitoring the risk in the company.

Remuneration

NHC's remuneration policy is adopted by the Board on an annual basis. In addition to fixed salary, up to 8 % of the operating result in any year may be allocated to employees by way of a bonus.

The variable remuneration scheme is split in two, where part one is collective and allocated among all employees and part two is individual and remuneration is based on individual and department performance according to set KPIs.

The variable part can count for up to 1/4 or 1/3 of the total compensation depending on position.

Material transaction with stakeholders

As a mutual insurance company, NHC will by definition enter into commercial agreements with member owners and with members of the Board of Directors. None of these transactions are considered material in relation to NHC's business volume.

2.2 Fit and proper requirements

The fit and proper requirements apply for the following positions in NHC:

- members of the Board, including deputies
- members of senior management (CEO, CUO, CCO, CFO, CBDO, CHRO)
- persons defined as key personnel (Head of Risk Management, Compliance Officer, Head of Reinsurance, Business Intelligence Director, Anti Money Laundering Officer and Internal Auditor)

For the Board, the requirements for professional know-how and experience (Fit) apply to the Board as a group. This implies that collectively, the Board shall have sufficient knowledge and experience in the key areas of operation for an insurance undertaking such as insurance, reinsurance, investments, risk management and marketing as well as regulatory frameworks, requirements and expectations.

For senior management and key personnel, the requirements for professional know-how and experience (Fit) apply to each person individually, and in relation to his/her specific area of responsibility. The following skills, knowledge and expertise are emphasized: market knowledge, business strategies and models, insurance, reinsurance, risk management, accounting, finance, investment, actuarial analysis and regulatory framework and requirements.

Fit and proper requirements will be subject to subjective assessment. An assessment of "Proper" should include an assessment of that person's honesty and financial standing based on relevant evidence regarding their character, personal behavior and business conduct including any criminal, financial and supervisory aspects regardless of jurisdiction. Certificate of good conduct and aptitude assessment shall be presented to the HR department for assessment.

2.3 Risk management system including the own risk and solvency assessment

The foundation of the good internal governance is a risk management framework and associated delegations of authority to ensure the effective management and reporting of risks in the organization.

2.3.1 Risk management system

In NHC the Board sets overall target, risk tolerance and risk appetite as part of the annual strategic planning. NHC will act in accordance with this risk appetite to achieve strategic objectives and to remain a prudent risk taker in order to safeguard the long-term interest of the Owners, Clients and Employees.

The Risk Committee is a sub-committee of the Board of NHC and shall serve as a body preparing issues for the Board and supporting them in its execution of its duties relating to risk management. The Risk Committee shall have the following responsibilities:

- Supervise NHC's total risk and they shall regularly consider if the management and risk management framework are adapted to the risk level and scope of the operations.
- Assess, in particular, if NHC has an appropriate risk management system in place. The assessment shall be based on the principles and policies adopted for risk management, including the stated risk appetite.
- Regularly consider the risk profile, capital and total capital requirement in relation to risks that NHC could be exposed to in the short and long term.
- Regularly consider the continuous compliance with capital requirements and requirements for technical insurance provisions. The Risk Committee shall consider any discrepancy between the risk profile and the assumptions made in calculating the solvency capital requirement.

The CEO is responsible for the risk management within limits defined annually by the Board in the Strategy, Financial Plan and Policy documents. Authority is delegated to heads of departments in accordance with these limits. Within the departments a system of authorities is defined and risk taking is always approved by at least two employees (four eyes principle). The CEO has established a Top Management Group (TMG). This group monitors the overall risk and discusses risk taking outside the authority of heads of department, controversial issues and risk taking that effect other departments. Final decisions are made by the CEO. Risk taking outside the limits set by the Board, or reallocation of the risk budget, can also be discussed with the purpose of suggesting changes in the strategy or other policy documents. The CEO has delegated the responsibility for risk management processes and follow-up to the Chief Financial Officer.

The Key Functions act as Second Line of defense and are overviewing and monitoring the risk in the company. NHC's Key functions provide regular risk reporting to TMG and to Risk Committee/Board regarding the key risks.

The Risk Management Function is to facilitate the implementation of the Risk Management System and ensure that risk management is carried out in accordance with approved ambition levels and approved guidelines.

2.3.2 Own risk and solvency assessment

The main purpose of the Own Risk and Solvency Assessment (ORSA) process and report is to safeguard the short-term (1 year) solvency and long-term survival of NHC. In addition, the report can give insight into risk/reward to improve the profitability.

NHC produces an ORSA report at least once a year. Additional ORSAs may be produced in response to material changes to risks faced by NHC.

The inputs include:

- The Board's policies
- The Board's strategy for the business
- Output from the standard model Pillar 1 process
- Actuarial function output
- NHC's Risk Management system

NHC has determined that the Solvency II standard formula shall be used to calculate the required solvency capital and to assess the overall solvency needs. In addition, quantitative analyses performed shall include:

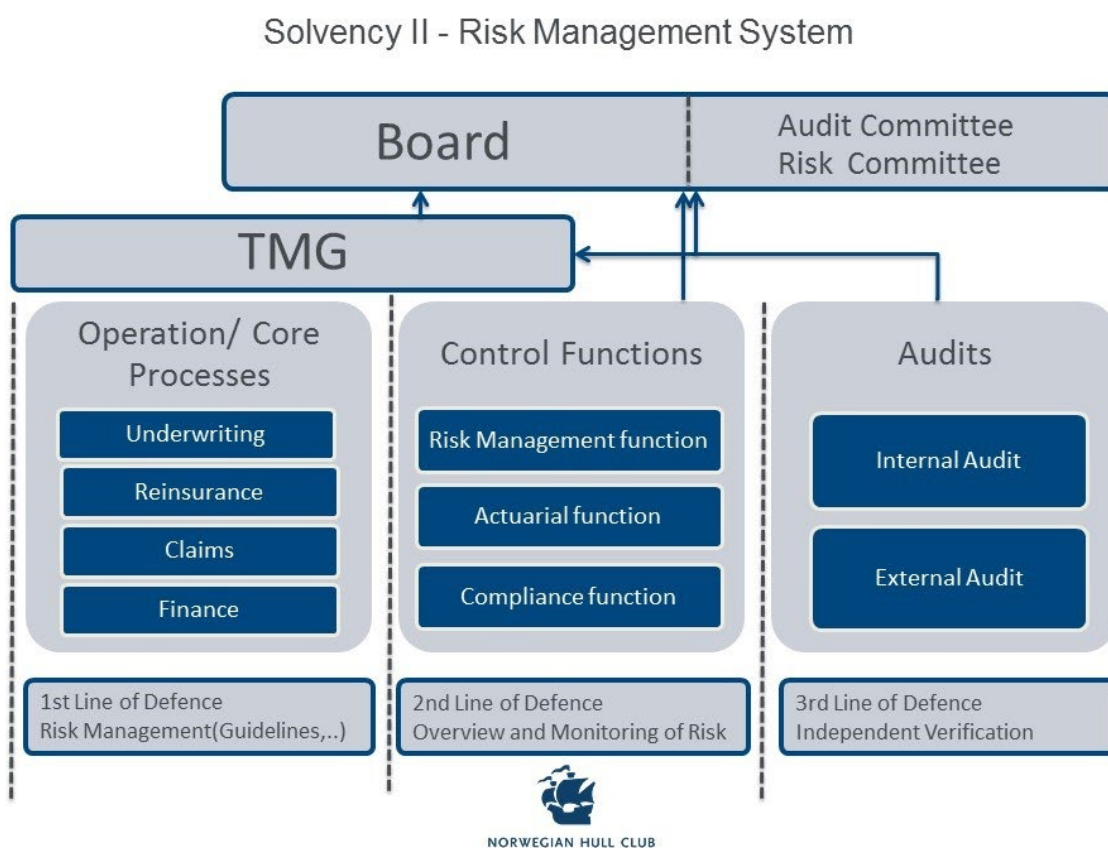

- Stress test to evaluate the capital situation when the investment and insurance portfolio puts the balance sheet under pressure;
- Scenario analyses of the insurance portfolio including varying premium volume, loss ratios and cost of reinsurance,

performed at least annually;

- Reverse stress testing;
- Financial Plan;
- Evaluation that the risk taking is in line with the risk appetite;
- Analysis of timeseries of the individual risks;
- Analysis of emerging risks including climate risk;
- A one in 200 years scenario is to be used;

2.4 Internal control system

NHC utilizes the internal control system that comprises three lines of defence, comprising primary risk owners (first line), independent risk management and control functions (second line) and an independent internal and external audit (third line). This structure is consistent with NHC's risk management structure and the Board considers it appropriate to the management of the NHC risks.

Under the first line of defence, operational management has the ownership, responsibility and accountability for assessing, controlling, mitigating and reporting risks.

The second line of defence consists of activities covered by Risk Management, Actuarial and Compliance functions. This line of defence monitors and facilitates the implementation of an effective risk management system by operational management and assists the risk owners in reporting risk related information both to management and towards the organization.

Internal and external audit forms the organisation's third line of defence. An independent internal audit function will provide independent and objective reviews and assessments of NHC's business activities, operations, financial systems and internal controls. NHC is using a third party for internal audit function.

This framework enables the first line of defence to identify, assess and manage operational risks within their business units, establishes an appropriate level of oversight and challenge by the second and third lines, and enables appropriate

measurement and reporting of operational risks and the NHC overall risk profile to the Board.

The DNA system has an important role in the overall Internal control system. All policies, principles and procedures for all departments are in place and documented in the DNA system, including formal revisions of same. Non-conformances, observations and suggestions for improvements and input regarding ORSA reporting and emerging risks are reported and followed-up in the same system.

2.4.1 Compliance function

The compliance function shall ensure that NHC complies with governing laws and regulations and internal policies that are derived from external requirements. The Compliance function may also design or update internal policies to mitigate the risk of NHC breaking laws and regulations, as well as lead internal audits of procedures. The Compliance function, headed by the Compliance Officer, is part of NHC's overall corporate governance structure. The function is responsible for the monitoring, managing, and reporting of the Compliance risks to which NHC is exposed. The Compliance function reports to the Head of Risk Management, but has a direct reporting line to the CEO, the Board and its sub committees. The activities of the Compliance function are subject to periodic review by Internal Audit.

2.5 Internal audit function

Internal Audit function provides independent and objective reviews and assessments of the business activities, operations, financial systems and internal controls. The internal audit shall ensure that NHC resources are used efficiently and effectively while working towards helping NHC achieve its mission, as directed by the Board. The function shall perform this service with professional care and with minimal disruption to NHC operations. NHC has outsourced the internal audit to a third party. The operative responsibility for the Internal Audit function is handled on a daily basis by the Compliance Officer (CO).

Based on internal risk assessment an annual audit plan is prepared and presented to the Board for approval. The internal auditor carries out annual reviews as stated in the annual plan to evaluate the appropriateness and effectiveness of the internal control processes.

Internal audit reports are provided to the Board at least once a year. The reports highlight any significant control failings or weaknesses identified and the impact they have had, or may have, and recommendations on how to mitigate the weakness. Outsourcing this function provides independent and objectivity when reviewing activities.

2.6 Actuarial function

Actuarial function is responsible for overseeing the calculation of technical provisions and report findings to the Board annually and to expressing an opinion on the underwriting policy and the reinsurance arrangements

Actuarial function will also contribute to the effective implementation of the risk management system with respect to the risk modelling underlying the capital requirements in particular.

The actuarial function is deeply involved in the ORSA process. This annual process is finalized through thorough discussion in the Risk Committee and the Board. Written opinions on the Underwriting Policy and Reinsurance arrangements are discussed with the Risk Committee and TMG. The report on the technical provisions is reviewed by the Board together with the annual accounts.

2.7 Outsourcing

NHC outsources and has outsourcing arrangements only where there is a sound commercial basis for doing so, and where the risk can be effectively managed. A due diligence process is undertaken prior to any final decision being made as to whether to outsource a material business activity. This addresses all material factors that would impact on the potential service provider's ability to perform the business activity.

NHC has established an Outsourcing Policy to establish the requirements for identifying, justifying and implementing material outsourcing arrangements. This policy has been adopted by the Board.

For the time being NHC has outsourced the following operational functions or activities:

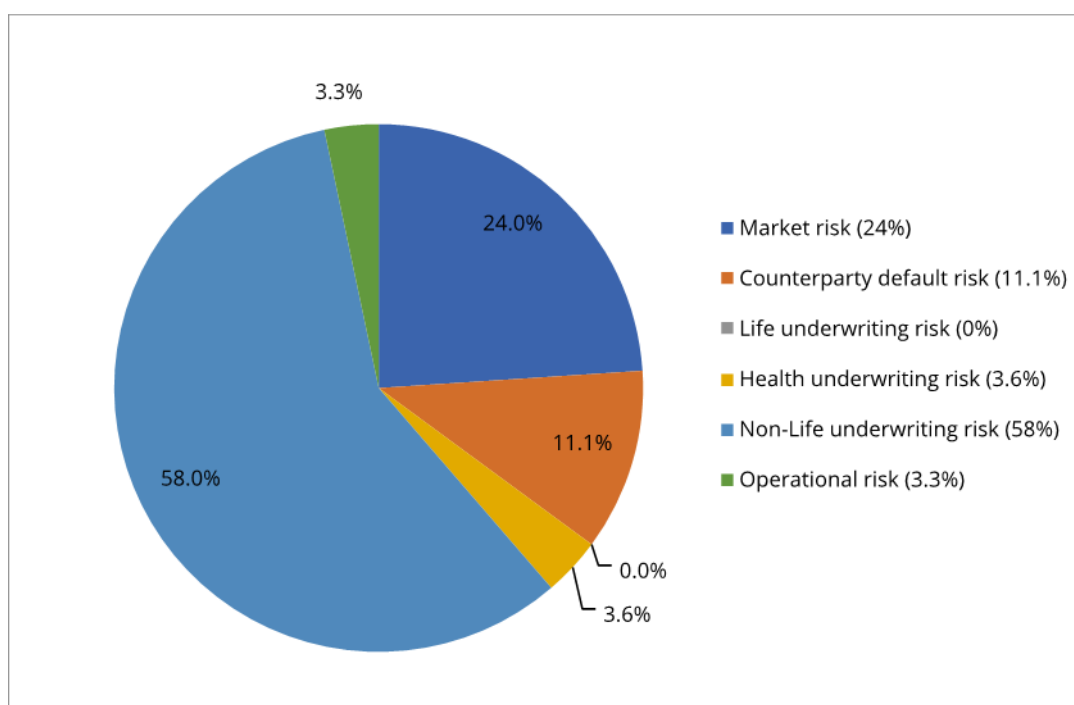

- Internal Audit – located in Norway
- IT Infrastructure – located in Norway
- Administrative support and service - located in Norway and the Philippines
- Asset/Fund management of two discretionary accounts – one located in the US and the other in the UK
- Underwriting of Medical Plan and Crew P&I – located in Norway
- Claims services of Medical Plan and Crew P&I – located in Norway, Singapore and the Philippines.
- Underwriting and Claims Service of H&M insurance (Small hull facility)

2.8 Any other information

There is no other material information to be disclosed.

3 Risk Profile

The below chart splits the Solvency Capital Requirement by risk group.

3.1 Underwriting risk

The Underwriting risk is the sum of premium and reserve risk, catastrophe risk and lapse risk.

The premium risk is the risk that the premium is insufficient to cover future claims. The reserve risk is the risk that the claim provisions are insufficient to cover incurred but not settled claims. The volume measure for the premium risk is the maximum of the past year's earned net premium and the expected earned net premium the next year with an add-on for multi-year policies. The volume measure for reserve risk is the net claims provision. The Standard Model assumes 50% correlation between premium and reserve risk.

Catastrophe risk is comprised of Non-life natural catastrophe risk (Windstorm, Earthquake, Flooding, Hail), Non-life man made catastrophe risk (total loss of tanker and platform) and health catastrophe (accident, concentration, pandemic). The only Nat-Cat scenarios affecting NHC are related to onshore marine (yards, refineries, etc.) and the Non-Marine Cat scenarios are thus dominated by the man-made scenarios (total loss of a tanker and/or a platform). These scenarios also affect the counterparty credit risk. The health cat risk is dominated by concentration risk.

Material risk concentrations

The standard model only identifies concentration risks in Health insurance. Un-modelled concentration risk includes any marine event involving several vessels/units. Historically there are few events involving severe casualties on several non-coastal vessels. The most likely events involving several vessels/units are related to ports, superyacht marinas, lay-up locations and yards in addition to fixed installations in windstorm areas. Most of the risk related to these events are reinsured.

Risk mitigation and process for monitoring its effectiveness

Excess of loss reinsurance is used to mitigate the underwriting risk. This has effectively reduced the effect of single claims.

Sensitivity

The standard model is sensitive to input related to claim provisions, premium projections, geographical diversification, allocation to lines of business and scenarios related to risk concentrations. There are no known issues related to the input that would result in a significant increase in the requirements if addressed differently.

Post loss capital requirements could increase as a major loss (or adverse claims development) could increase technical provisions and thus capital requirements. Large market losses might also lead to a recalibration of the CAT modelling from EIOPA.

The main sensitivity going forward is changes in the parameters (standard deviations and correlations) or CAT modelling from EIOPA. The former could be addressed by using undertaking specific parameters, but this would give rise to increased model recalibration risk.

3.1.1 Life underwriting risk

Life underwriting risk	2021	2020
Mortality risk	-	-
Longevity risk	-	-
Disability-morbidity risk	-	-
Lapse risk	-	-
Expense risk	-	-
Revision risk	-	-
Catastrophe risk	-	-
Diversification	-	-
Total life underwriting risk	-	-

NHC does not write life insurance.

3.1.2 Health underwriting risk

Health underwriting risk	2021	2020
Mortality risk	-	-
Longevity risk	-	-
Disability-morbidity risk	-	-
Lapse risk	-	-
Expense risk	-	-
Revision risk	-	-
Diversification	-	-
Total SLT health underwriting risk	-	-
Premium and reserve risk	3,405,540	2,469,331
Lapse risk	341,579	153,431
Diversification	(324,492)	(148,669)
Total NSLT health underwriting risk	3,422,627	2,474,093
Catastrophe risk	7,199,597	4,010,720
Diversification	(1,911,923)	(1,272,476)
Total health underwriting risk	8,710,301	5,212,337

3.1.3 Non-Life underwriting risk

Non-Life underwriting risk	2021	2020
Premium and reserve risk	128,838,837	107,865,817
Lapse risk	12,380,461	9,900,649
Catastrophe risk	32,746,966	24,420,282
Diversification	(32,776,230)	(25,368,666)
Total non-life underwriting risk	141,190,036	116,818,083

The standard model uses the net premium volume, the net claim reserve, the geographic spread, the product spread and the exposure to specific scenarios as the key risk drivers. The growth in premium explains the growth in underwriting risk. For internal purposes the risk is modelled using historic premium and claims data, stochastic simulation, various scenarios and comprehensive systems for modelling premium rate adequacy.

3.2 Market risk

The table below lists the gross SCR for the risk module Market risk, split by its sub modules.

Market risk	2021	2020
Interest rate risk	5,921,039	8,205,431
Equity risk	30,854,186	25,578,299
Property risk	14,471,529	13,728,910
Spread risk	17,507,789	18,062,385
Concentrations	-	-
Currency risk	4,193,413	4,355,706
Diversification	(14,654,403)	(16,397,340)
Total market risk	58,293,553	53,533,390

Market risk covers risk related to investments. Investments returns can fluctuate caused by changes in expected future economic conditions and changes to investor risk preferences. This affects real investments (equity and real estate) and nominal investments (fixed income) as both interest rates and risk premiums fluctuates as expectations changes.

NHC seeks to expose the portfolios to systematic market risk and have thus implemented highly diversified asset portfolios to diversify away specific company risks. All asset classes are highly diversified.

Spread risk is the risk that market pricing of credit risk increase. To reduce the spread risk, the bond portfolio shall have an

adequate rating level from a holistic point of view.

The capital requirements for Equity risk, Property risk, Bonds and Currency are calculated as predefined shocks applied on the market value in these assets. The capital requirement for interest rate risk is also affected by size and duration of the technical provisions. The capital requirement for concentration risk is based on assets with a market value in excess of certain percentages of the overall investments. In addition to assuming asset class specific shocks, the model assumes specific correlations between the various asset classes.

Measures used to assess the risk, material risks and changes the past year

The standard model assesses the risk based on market value per asset class and assumptions regarding volatility per asset class. For internal purposes, the risk is also modelled based on historic volatility and stress testing.

Investments according to the "prudent person principle"

NHC, and particularly the Front – office of the finance department, shall carefully evaluate the merits of each investment in the investment portfolio, both on a stand-alone basis and its impact on the overall portfolio, in relation to the overall investment strategy, asset – liability management objective and liquidity objective. No investment shall be made unless the characteristics and impact of the security or fund is fully understood and evaluated.

In addition to the front-office function there are separate mid- and back-office functions in order to secure independent reporting and control.

The interest rate duration of the investment grade portfolio is aligned with the duration of the insurance liabilities. Limits on interest rate risk deviations from benchmark are established as part of the investment strategy.

Foreign Exchange risk is managed and hedged with US Dollars as base currency. NHC Equity and capital is measured in US Dollars. Calculation of foreign exchange risk are performed as an integral part of the preparation of the quarterly accounts. In case of major incidents, calculation shall be made on an ad-hoc basis. Major incidents are single incidents, originated in a non-USD currency, with an effect on the net result exceeding USD 5.0 mill.

NHC can deploy interest rate derivatives to efficiently adjust interest rate risk to desired levels and foreign exchange instruments to achieve targeted currency allocation. Furthermore, derivatives shall only be used to the extent that we fully understand the instruments and to the extent that we are able to implement the instruments in our portfolio systems.

Diversification is a key feature in reducing the level of absolute risk and increase risk adjusted returns in the investment portfolio. Furthermore, the intention is to identify plurality of sources to potential income (and inherently risk) as a means of limiting the correlation risk. Investment risk is reduced by diversifying in to several asset classes as defined by strategic asset allocation and the broad benchmarks adopted in the NHC strategy. Within the different asset classes, the portfolio is broadly diversified on issuers, corporations, sectors and geographical areas. Retaining visibility and transparency of investments undertaken is important in this regard.

Investment concentration risk

Except for US and German sovereign risk, maximum exposure on any singly issuer shall not exceed 5 % of NHC equity. Concentration risk is managed as part of ordinary risk management of the investment portfolio.

Risk mitigation and process for monitoring its effectiveness

While USD is the base currency of operations, NHC writes policies in several other currencies, primarily EUR and NOK. NHC uses various contracts to manage currency risk related to the balance sheet. At a detailed level, it is inherently challenging to monitor the effectiveness of these contracts as the exact currency position is only known when full financial accounts are prepared each quarter.

Interest rate risk is primarily managed through allocation to asset classes and securities in the investment portfolio. For sake of efficiency, adjustments to interest rate risk may be made through financial contracts such as futures or swaps.

Sensitivity

The standard model is sensitive to input related market values, allocation to asset classes and duration and credit quality in the bond portfolio. There are no known issues related to the input that would result in a significant increase in the requirements if addressed differently.

Unlike underwriting risk, market risk has the feature that a market loss will reduce the capital requirement if investments are not reallocated to risky assets.

The main sensitivity going forward is changes in the parameters (standard deviations and correlations) from EIOPA.

3.3 Credit risk

The table below lists the Solvency Capital Requirement for the Counterparty Default Risk:

Counterparty default risk	2021	2020
Type 1 exposures	13,388,511	12,916,576
Type 2 exposures	15,576,245	27,209,475
Diversification	(1,859,669)	(2,252,929)
Total counterparty default risk	27,105,088	37,873,122

Credit risk is handled separately for rated counterparts (type 1 risk) and unrated counterparts (type 2 risks). Rated counterparts include reinsurers, co-insurers and banks. This risk is dominated by the expected losses in the event of a Man-Made Cat event. Unrated counterparts is dominated by policyholder's receivables. In 2020 receivables that were not overdue (future premium installments) were included in the calculations as the regulations are unclear on this issue. In 2021 only overdue receivables are included, and the calculated requirements is therefore reduced.

Material risk concentration

The man-made cat scenario involves a concentration on reinsurance recoveries from Lloyd's syndicates.

Risk mitigation and process for monitoring the effectiveness

The risk related to policyholder receivables is reduced by continuous monitoring, setting off premium receivables for outstanding claims and cancellation of contracts. Consequently, the risk is considered significantly lower than modelled. The risk related to reinsurers is reduced by using reinsurance with A – AAA rating.

Sensitivity

The standard model is sensitive to the interpretation of the type 2 credit risk model. A different interpretation could lead to a material reduction in this element of the capital requirement.

The type 1 credit risk is calculated based on the simplifications suggested by the Delegated Regulation. This underestimates the concentration on reinsurance recoverables from Lloyd's in the event of a worst-case marine loss. In the more realistic event that NHC is affected by 2-3 large (but not extreme) claims the modelling is reasonable.

3.4 Liquidity risk

Model results and description of risks

There is no capital requirement for liquidity risk. Liquidity risk is the risk that NHC will not be able to meet obligations when due. The liquidity risk in the investment portfolio is considered low as most of the portfolio is invested in assets that under normal circumstances are highly liquid. These are government bonds, corporate bonds and public equities. Other types of investments, as real estate and private markets are considered to be illiquid, even though secondary markets are available for most of them.

Policyholder receivables (premium receivables and disbursements) is a large, illiquid asset. To some extent this can, however, be set off against outstanding claims.

Risk mitigation and process for monitoring the effectiveness

NHC's reinsurance contracts has a "simultaneous payment clause" that transfers much of the liquidity risk to reinsurers (as reinsurance recoverable can be collected before payment is made to the assured). In addition, NHC has a credit facility with Nordea of 30 MUSD.

Expected profit in future premium

Expected Profit in future premium represents a small amount of own funds and the illiquidity of this asset has therefore no material effect on liquidity. The amount has increased due to growth in premium volume and increased premium rates.

Expected profits included in future premiums (EPIFP)	2021	2020
EPIFP Life business	-	-
EPIFP Non-life business	31,805,101	25,100,536
Total EPIFP	31,805,101	25,100,536

3.5 Operational risk

NHC has implemented an Operational Risk policy that describes how Norwegian Hull Club is systematically identifying, assessing, mitigating, managing and reporting the operational risks. The document also describes the ownership of the operational risks and gives an overview of the control environment.

Operational risks can be defined as risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events. Operational risks are included in the regulatory capital requirements of Solvency II and thus included in NHC's internal capital models.

Risk Management Function facilitates a yearly risk assessment process where all the departments in NHC will identify and assess all the known risks. Risk Management function in cooperation with TMG selects the most critical risks which will be managed, monitored and reported on a quarterly basis.

In addition to annual risk identification and evaluation process, managers are also responsible for continuously identifying and assessing other operational risks e.g related to projects, outsourcing etc.

All NHC employees are also responsible for identifying and reporting new emerging operational risks. Emerging risks are new risks or familiar risks that become apparent in new or unfamiliar conditions. Sources of emerging risks can be for example:

- Human
- Natural
- New technologies
- Economic, societal, environmental, regulatory or political changes

Risk owners are responsible for identifying relevant mitigating actions for operational risks (actions to mitigate the risk/reduce the likelihood) and for implementing identified actions. Controls shall be put in place to limit the exposure of the risks and the potential damage caused by the risks. Risk owners shall also prepare contingent actions (actions to be taken if the risks materialize).

NHC has implemented a quarterly risk reporting process which is driven by the Risk Management Function. The results of the risk reporting are provided to TMG and to Risk Committee.

The operational risk measurement system is complemented by a Non-Conformance reporting system, which is also documented and followed up in the total quality management system.

The capital requirement for operational risk is calculated as the maximum of 3% of the gross technical provisions and 3% of the earned gross premium the past 12 month, with an add-on if the premium has grown more than 20% the past 12 months.

3.6 Other material risks

Loss absorbing capacity of deferred tax:

The Solvency II regulation assumes a loss absorbing capacity of deferred tax. The issue has been considered through NHC's annual ORSA process. The conclusion was that the loss absorbing capacity of deferred tax is questionable as the taxable result can deviate substantially from the operating result. If an extreme loss scenario is combined with strong USD appreciation (as during the financial crisis) the taxable result can be positive even though the net operating result is negative. No loss absorbing capacity of deferred tax is thus assumed.

Diversification effects

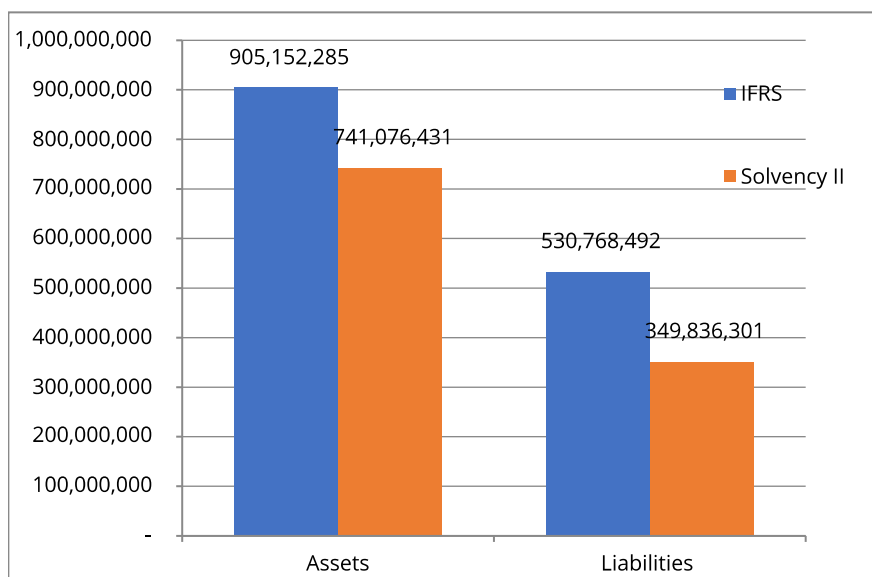

It is highly unlikely that worst case scenarios in all the various risk classes occur simultaneously. The standard model thus assumes a certain correlation between the various risks in order to reduce the overall risk for diversification benefits.

3.7 Any other information

No other material information regarding risk to disclose.

4 Valuation for solvency purposes

The chart below displays a summary of assets and liabilities, listed per the valuation for solvency purposes and per valuation in financial statements.

4.1 Assets

The below table shows assets per material class (table 02.01.02 in the appendix contains further details).

Assets	IFRS	Solvency II	Delta
Intangible assets	-	-	-
Deferred tax assets	-	-	-
Financial investments	561,421,355	561,421,355	-
Index and unit linked investments	-	-	-
Loans and mortgages	6,161,836	6,161,836	-
Reinsurance recoverables	64,850,014	37,197,565	(27,652,449)
Cash and cash equivalents	40,588,225	40,588,225	-
Other assets	232,130,855	95,707,450	(136,423,405)
Total assets	905,152,285	741,076,431	(164,075,854)

Assets are valued based on the assumption that the undertaking will pursue its business as a going concern and are valued in conformity with international accounting standards. Assets are valued according to quoted market prices in active markets, if available. Where the use of quoted market prices is not possible, NHC use quoted market prices for similar assets and liabilities with adjustments to reflect differences. The use of alternative valuation methods makes maximum use of relevant market inputs and rely as little as possible on undertaking-specific inputs.

According to Norwegian generally accepted accounting principles there are some exemptions to common assessment and valuation principles. Comments to these exemptions follow below.

Accounts Receivables

Receivables are accounted for at face value with deductions for expected loss.

Employee loans

Employee loans are accounted for at face value with deductions for expected loss. At year end there were no deductions made.

Fixed assets and depreciation

Fixed assets are recorded in the accounts at historical cost less depreciation. Historical cost includes expenditure that is directly attributable to the acquisitions of the items. Depreciation is calculated using the straight-line method. Upgrading of rented office premises is depreciated over the rent period. If the fair value of a fixed asset is lower than book value, and the decline is not temporary, the fixed asset will be written down to fair value. Depreciation is classified as other insurance related expenses.

Foreign exchange

USD is NHC's functional and presentation currency.

Receivables and liabilities (including technical insurance obligations) in foreign currencies are translated into USD at the year-end exchange rates. Foreign exchange gains and losses that relate to payables, receivables and cash and cash equivalents are presented in the statement of comprehensive income under financial income or costs as currency gain/loss. All other foreign exchange gains and losses are posted in the statement of comprehensive income under items they relate to. Securities and financial instruments in other currencies are valued in USD at the year-end exchange rates.

Investments

Note 6 in the annual report set out an overview of the carrying and fair values of NHC's financial instruments and the accounting treatment of these instruments as defined in IAS 39.

Explanation of material differences between Solvency and Statutory Values

Reinsurance Recoverables - Reclassification and Revaluation

The Solvency II reinsurance recoverables are reduced for expected losses on reinsurance, expected profit to reinsurers and discounting. In addition, the recoverables reflects contract boundaries as defined by the Solvency II directive and thus includes policies with inception in the beginning of the next year and multi-year contracts. This also reduce the recoverables as expected claims are lower than expected premium. In addition to these revaluations "reinsurance payables" are deducted from the recoverables. The latter is the most material difference, but does not affect own funds as there is no "reinsurance payables" liability on the Solvency II balance sheet.

Insurance and intermediaries' receivables – Reclassification

On the Solvency II balance sheet undue premium receivables are deducted from the premium provision and thus reduce this liability. This part of the receivables is therefore removed from the assets. This is a reclassification and therefore does not affect own funds.

4.1.1 Material intangible assets

NHC has no material intangible assets on the balance sheet.

4.1.2 Material financial assets

NHC uses the opportunity that is given insurance companies in "Regulations for annual accounts for insurance companies approved by the Norwegian Ministry of Finance" to present all financial assets at fair value through profit and loss in accordance with the fair value option, if not otherwise decided before investment in a financial asset is made. This means that the fair value adjustments on financial assets are recognized in income before other comprehensive income.

Financial instruments are valued at fair market value. Such financial instruments are equities (both listed and unlisted), bonds and other interest generating investments, real estate funds and money market funds. Foreign exchange contracts are valued at fair market value as well.

Regular purchases and sales of financial assets are recognised on the trade date. Investments are initially recognised at fair value plus transaction costs for all financial assets not carried at fair value through profit or loss. Financial assets carried at fair value through profit or loss are initially recognised at fair value and transaction costs are expensed in the income statement. Financial assets are derecognised when the rights to receive cash flows from the investments have expired or have been transferred and NHC has transferred substantially all risks and rewards of ownership. Realized gains / losses on financial instruments are presented on a separate line in the statement of comprehensive income. Interest and dividends income are included in financial income for financial assets at fair value through profit and loss.

Investments

Note 7 in the annual report set out an overview of the carrying and fair values of NHC's financial instruments and the accounting treatment of these instruments as defined in IAS 39.

Fair value hierarchy

Government bonds, corporate bonds and other financial instruments that are traded in active markets where the fair value is determined on the basis of quoted market prices at the balance sheet date, are classified on level 1 in the pricing hierarchy. A market is regarded as active if quoted prices are readily and regularly available from an exchange, dealer, broker, industry group, pricing service, or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis.

The fair value of financial instruments that are not traded in an active market is determined by using valuation techniques. These valuation techniques maximize the use of observable market data where it is available and rely as little as possible on entity specific estimates. If all significant inputs required to value an instrument are observable, the instrument is included in level 2. Investments listed in the following have been classified on level two in the pricing hierarchy:

Equity funds, government bond funds, corporate bond funds and high yield bond funds. Values are determined on the basis of

the quoted market prices of the assets the funds have invested in.

Currency futures, interest rate futures, stock and equity options, credit default swaps and currency swaps. Values are determined on the basis of the price development on an underlying asset or instrument. The before mentioned categories of derivatives are being priced by using standard and well recognized methods of pricing like option pricing models etc.

If one or more of the significant inputs is not based on observable market data, the instrument is included in level 3.

Investments listed in the following have been classified on level three in the pricing hierarchy:

Unlisted Private Equity and Private Loans investments

All of these are either investment in funds or in fund of funds. Values are determined on the basis of quarterly NAV (Net Asset Value) reports from the fund managers. These reports are prepared based on the IPEV (International Private Equity and venture capital Valuation) guidelines set forth by the Equity Venture Capital Association or corresponding guidelines in the respective jurisdiction of the underlying funds. NAVs are calculated by the fund managers by making use of those methods of pricing in the IPEV and similar guidelines that are most suited to estimate actual value for each type of asset subject all relevant factors. Due to late reporting, NAVs as per the last quarterly reports are used in the accounts. The NAV from the most recent quarterly report is adjusted for capital distributions and/or capital calls in the period until 31.12, and might be adjusted if incidents of material character have occurred during the period since last reporting date. An example in this respect could be a substantial change in the market value of a listed company a Private Equity fund has invested in:

- Real Estate funds

As for Private Equity, values are determined on the basis of quarterly NAV reports from the fund managers. Minimum yearly, the values of all properties in the funds are assessed by a publicly authorized real estate agent or valuator. The assessed values of the properties adjusted for other assets and liabilities, and if relevant expected cash flow (for example differentials due to future requirements and/or regulation that will impact the future cash flow of the properties) make up the basis for the NAVs.

Further details are available in Note 7 in the annual report.

4.1.3 Financial and operational leases

NHC has no material financial or operational leases.

4.1.4 Material deferred taxes

NHC has no deferred tax assets.

4.1.5 Related undertakings

Shares in subsidiaries are valued using the cost method in the NHC accounts. Cost increases when the parent gives the subsidiary increased equity capital by subscription for share issue or group contribution. Dividends / group contribution received is normally recognized as income, but only to the extent that dividends / group contribution received from subsidiary does not exceed the share of retained earnings in the subsidiaries after the purchase. Received dividends / group contributions in excess of this amount are recorded as a reduction of the acquisition cost. NHC records received dividend / group contributions the same year as the subsidiary makes the provisions.

Associated companies valued using the equity method.

4.1.6 Changes to valuation bases during period

No changes to valuation bases during the period

4.2 Technical provisions

The table below shows the valuation of technical provisions, for solvency purposes and the valuation in financial statements.

Technical provisions	IFRS	Solvency II	Delta
Technical provisions non-life	409,884,019	246,731,784	(163,152,235)
Best estimate		229,614,850	
Risk margin		17,116,934	
Technical provisions life (ex. index-linked and unit-linked)	-	-	-
Best estimate		-	
Risk margin		-	
Technical provisions index-linked and unit-linked	-	-	-
Best estimate		-	
Risk margin		-	
Other technical provisions	-		-
Total technical provisions	409,884,019	246,731,784	(163,152,235)

4.2.1 Life technical provisions

NHC does not write life-insurance.

Life and Health SLT	2021			2020		
	Technical provisions	Best estimate (gross)	Risk margin	Technical provisions	Best estimate (gross)	Risk margin
Insurance with profit participation	-	-	-	-	-	-
Index-linked and unit-linked insurance	-	-	-	-	-	-
Other life insurance	-	-	-	-	-	-
Annuities stemming from non-life insurance contracts and relating to insurance obligation other than health insurance obligations	-	-	-	-	-	-
Accepted reinsurance	-	-	-	-	-	-
Health insurance (direct business)	-	-	-	-	-	-
Annuities stemming from non-life insurance contracts and relating to health insurance obligations	-	-	-	-	-	-
Health reinsurance (reinsurance accepted)	-	-	-	-	-	-
Total Life and Health SLT	-	-	-	-	-	-

4.2.2 Non-Life technical provisions

The table below displays the valuation for solvency purposes for technical provisions split by Marine and Medical Insurance.

Non-Life	2021			2020		
	Technical provisions	Best estimate (gross)	Risk margin	Technical provisions	Best estimate (gross)	Risk margin
Medical expense insurance	6,312,964	5,875,004	437,960	6,006,955	5,621,755	385,200
Income protection insurance	-	-	-	-	-	-
Workers' compensation insurance	-	-	-	-	-	-
Motor vehicle liability insurance	-	-	-	-	-	-
Other motor insurance	-	-	-	-	-	-
Marine, aviation and transport insurance	240,418,820	223,739,846	16,678,974	228,074,082	213,448,680	14,625,402
Fire and other damage to property insurance	-	-	-	-	-	-
General liability insurance	-	-	-	-	-	-
Credit and suretyship insurance	-	-	-	-	-	-
Legal expenses insurance	-	-	-	-	-	-
Assistance	-	-	-	-	-	-
Miscellaneous financial loss	-	-	-	-	-	-
Non-proportional health reinsurance	-	-	-	-	-	-
Non-proportional casualty reinsurance	-	-	-	-	-	-
Non-proportional marine, aviation and transport reinsurance	-	-	-	-	-	-
Non-proportional property reinsurance	-	-	-	-	-	-
Total Non-Life	246,731,784	229,614,850	17,116,934	234,081,036	219,070,435	15,010,601

Best estimates, risk margins, methods and assumptions

The premium provision covers future claims on written policies. The provision is very low as premium receivables are deducted from the expected claims. The net provision is negative as parts of the reinsurance program is paid up-front, and the net future cash-flow from reinsurance is therefore positive.

The claims provisions cover incurred but not settled claims. The provision is calculated based on case estimates and IBNR reserves based on the Benktander method for most lines of business. The provisions are discounted based on risk free interest rates in three currencies.

The risk margin is an additional margin to make the overall provision sufficient for a third party to accept to take over the liability. The risk margin is calculated according to the Cost of Capital method with a Cost-of-Capital rate of 6%, in line with the Delegated Regulation.

Level of uncertainty

The premium provision covers future claims on written policies. As marine insurance is a high severity line of business, the level of uncertainty associated with this provision is very high.

The uncertainty of the claim provision is assessed based on historic run off results. The net run off result has been negative the past 4 years after 5 years of positive results. The average loss the past 4 years is 2,8 MUSD. The run-off standard deviation the past 10 years is 7 MUSD.

Material differences between valuation for Solvency purposes and financial statement

Premium provision:

	Solvency II	Statutory Accounts	Comment
Unearned Gross Premium	162 179 692		
Expected Profit in unearned premium	-29 504 473		Negative = profit
Expected Profit in written 2022 business	-6 263 048		Negative = profit
Expected Profit in long term policies	-3 301 911		Negative = profit
Non due premium receivables	-136 423 405	0	Reclassification
Discounting	-2 220 068		
Gross Premium Provision	-15 533 213	-	

The most important difference between the Solvency II valuation and the Statutory Accounts is that non due premium receivables are deducted from the former. This difference represents a reclassification (rather than a revaluation) and therefore does not affect own funds. This makes the Solvency II Premium Provision hard to interpret. In addition, expected profit in future premium is deducted.

Claims Provision

The Solvency II claim provisions are discounted. This reduces the reserves by 2% compared to the Statutory Accounts. With the current interest rates this has almost no effect on the reserves.

Risk Margin

There is no risk margin in the Statutory Accounts.

Adjustments

None of the available measures to reduce the provisions have been applied (matching adjustment, volatility adjustment, transitional term structure, transitional deduction).

Recoverables from reinsurance contracts

In the statutory accounts, recoverables from reinsurance equals the unearned reinsurance premium and the reinsurers' share of the gross claim's provisions. The latter is based on reinsurer's share of incurred, but not settled claims on a case by case basis and reinsurers' estimated share of the IBNR claims. The Solvency II recoverables are based on an adjusted version of the statutory accounts (allowing for discounting, expected counterparty losses, expected reinsurer profit and extended contract boundaries). The adjustments are described in Section D.1 above.

Changes during the year

There are no material changes in the calculation of technical provisions during the year.

4.3 Other liabilities

The below table shows other liabilities:

Liabilities	IFRS	Solvency II	Delta
Technical provisions	409,884,019	246,731,784	(163,152,235)
Pension obligations	4,251,799	4,251,799	-
Deferred tax liabilities	47,905,911	47,905,911	-
Derivatives	324,696	324,696	-
Financial liabilities	-	-	-
Subordinated liabilities	-	-	-
Other liabilities	68,402,067	50,622,110	(17,779,957)
Total liabilities	530,768,492	349,836,301	(180,932,191)

Pension cost, funding and obligations

The liability recognised in the balance sheet in respect of defined benefit pension plans is the present value of the defined benefit obligation at the end of the reporting period. This is pension obligations for some pensioners. These are non-funded obligations

Deferred tax and tax expense

Deferred tax is calculated based on temporary differences between book values and tax basis for assets and liabilities at year-end. For the purpose of calculating deferred tax, nominal tax rates are used. Taxable and deductible temporary differences are offset to the extent they reverse within the same time frame. However, deferred tax liabilities on net pension assets are treated separately. Temporary differences that will constitute a future tax deduction give rise to a deferred tax asset. Change in deferred tax liability and deferred tax asset, together with taxes payable for the fiscal year adjusted for errors in previous year's tax calculations constitutes tax expenses for the year.

Reinsurance payable – Reclassification

On the Solvency II balance sheet the liability “reinsurance payables” is deducted from the asset “reinsurance recoverables”. This does not affect own funds.

4.4 Alternative methods for valuation

Covered under D1

4.5 Any other information

Ref. section 5.1 below for a summary of the overall effect of the revaluation of the assets and liabilities for Solvency purposes.

5 Capital Management

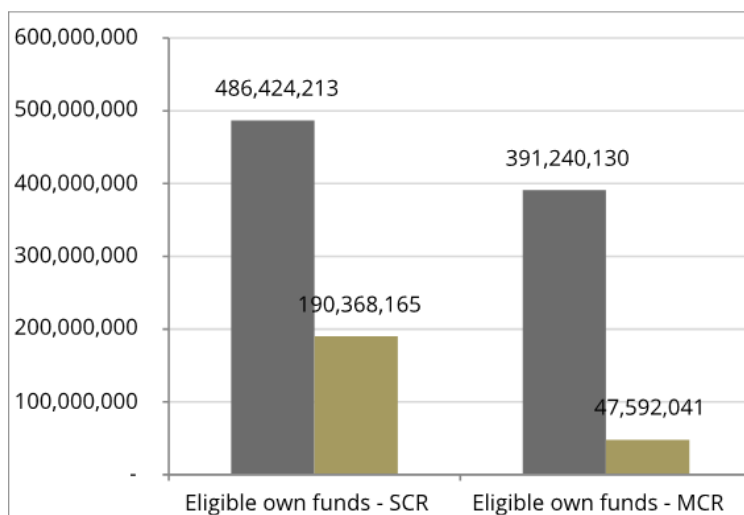

The different contributing elements to SCR and MCR are represented in the table below, it also includes the total SCR/MCR and corresponding ratios.

	2021		2020	
	SCR	MCR	SCR	MCR
Eligible Own Funds	486,424	391,240	426,565	346,482
Capital Requirement	190,368	47,592	170,535	43,706
Difference	296,056	343,648	256,030	302,776
Ratio	256%	822%	250%	793%

The increase in Own Funds and Capital Requirement is partly due to increased premium volume. The increased premium increase Own Funds through increased profit in future premium and increased Ancillary Tier 2 Capital (supplementary mutual members calls) and also increase the underwriting risk. In addition own funds increase due to a retained earnings in 2021. The SFCR report and accounts assumes 17 MUSD to be returned to members as mutual member premium return.

5.1 Own funds

The following chart shows an overview of the own funds figures:

Own funds are currently a mix of unrestricted Tier 1 capital and supplementary mutual calls as Tier 2 (ancillary) capital. Additional premium has not been called since 1947 and is considered an option of last resort. In addition, the following factors affects the development of own funds: The operating result, deferred tax, change in expected profit in future premium, changes in the effect of discounting reserves, changes in expected losses on reinsurance receivables.

5.1.1 Capital management

NHC has a target of 50% margin in excess of the highest of the S&P capital requirement and the Solvency II SCR. If the margin drops below 25%, risk-reducing measures will be implemented.

A basic assumption in all capital planning and risk management is that NHC shall not have to or rely on making a supplemental call on mutual members, i.e. calling extra premium in order to meet insurance liabilities.

Material Differences between NHC's financial statement equity and Own funds:

The differences between the Solvency II balance sheet and the Statutory accounts is a mix of reclassifications and revaluations. The following table shows the effect on own funds:

	To Cover SCR	To Cover MCR
Statutory Equity	374 395 634	374 395 634
Discounting Claim Reserve	2 193 790	2 193 790
Risk Margin	-17 116 934	-17 116 934
Expected profit future premium	31 803 484	31 803 484
Supplemental mutual calls	95 184 083	-
Solvency II Value	486 424 213	391 240 130

5.1.2 Own funds tiers - SCR

Eligible own funds SCR	2021	2020
Tier 1 (unrestricted)	391,240,130	346,481,558
Tier 1 (restricted)	-	-
Tier 2	95,184,083	80,083,500
Tier 3	-	-
Total eligible own funds SCR	486,424,213	426,565,058

Supplementary Members Calls are included as Tier 2 capital.

5.1.3 Own funds tiers - MCR

Eligible own funds MCR	2021	2020
Tier 1 (unrestricted)	391,240,130	346,481,558
Tier 1 (restricted)	-	-
Tier 2	-	-
Tier 3	-	-
Total eligible own funds MCR	391,240,130	346,481,558

Supplementary Members Calls (ancillary tier 2 capital) do not contribute to the capital eligible to meet the MCR requirement.

5.2 Solvency capital requirement and minimum capital requirement

Split by risk modules, the table below displays information about the SCR breakdown.

SCR risk modules	2021	2020
Market risk	58,293,553	53,533,390
Counterparty default risk	27,105,088	37,873,122
Life underwriting risk	-	-
Health underwriting risk	8,710,301	5,212,337
Non-life underwriting risk	141,190,036	116,818,083
Diversification	(52,960,083)	(49,800,478)
Basic Solvency Capital Requirement	182,338,894	163,636,452
Operational Risk	8,029,271	6,898,782
Loss-absorbing capacity of technical provisions	-	-
Loss-absorbing capacity of deferred taxes	-	-
Solvency Capital Requirement (SCR)	190,368,165	170,535,235
Minimum Capital Requirement (MCR)	47,592,041	43,705,562

The minimum capital requirement is calculated per line of business as the sum of the written net premium multiplied by a premium risk factor and the net technical provisions per line of business multiplied by a reserving risk factor. The total MCR equals the sum of the MCR per line of business. MCR is designed to lie between 25% and 45% of SCR. The low MCR/SCR ratio suggests a high SCR. This is caused by the high capital charge in the Marine Line of Business and risk taking in areas that are not explicitly reflected in the MCR (investment risk and credit risk).

5.3 Use of duration based equity risk sub module in the calculation of the SCR

NHC does not apply the duration based approach.

5.4 Differences between the standard formula and any internal model used

NHC does not use an internal model.

5.5 Non-compliance with the minimum capital requirement and non-compliance with the solvency capital requirements

NHC has sufficient amount of capital to meet the capital requirements.

5.6 Any other information

NHC applies the simplifications described in Article 107, 110, 111, 112 of the Delegated Regulation.

Appendix

As part of the SFCR, undertakings are expected to disclose the templates attached in this Appendix. The monetary amounts are disclosed in thousands of units.
